PRAVEEN PARA

Azure Data Engineer | 2.8 Years Experience | DP-203 Certified

Bengaluru, India | +91-9121608025 | Parapraveen98@gmail.com | linkedin.com/in/para-praveen-7151b4274

PROFESSIONAL SUMMARY

Results-driven Azure Data Engineer with around 3 years of experience designing, building, and managing enterprise-scale cloud data platforms on Microsoft Azure. Proven expertise in Azure Data Factory (ADF), Azure Databricks, PySpark, Delta Lake Medallion Architecture, Azure Synapse Analytics, Microsoft Fabric, dbt, Azure DevOps CI/CD, and Power BI. Delivered high-impact solutions for global clients including Shell India and FedEx — migrating on-premises platforms to Azure, building real-time streaming pipelines processing 50M+ records daily, and executing 100%-accurate large-scale Salesforce data migrations across 2M+ records. Experienced in data governance, RBAC, Azure Purview, data quality frameworks, and Agile delivery. Holds Microsoft Certified: Azure Data Engineer Associate (DP-203).

TECHNICAL SKILLS

Cloud & Azure Services: Azure Data Factory (ADF), Azure Databricks, Azure Synapse Analytics, Azure Data Lake Storage Gen2 (ADLS Gen2), Azure Event Hubs, Azure Stream Analytics, Azure SQL Database, Azure Key Vault, Azure Monitor, Logic Apps, Microsoft Fabric (Lakehouse, Dataflows, Pipelines)

Big Data & Processing: PySpark, Apache Spark, Delta Lake (Bronze / Silver / Gold), Medallion Architecture, Batch Processing, Real-time Streaming, Change Data Capture (CDC), Structured Streaming

Data Transformation & Warehousing: dbt (data build tool), ETL / ELT Development, Incremental Load Strategies, Data Modeling, Star Schema, Snowflake Schema, Slowly Changing Dimensions (SCD), Data Warehousing, Data Migration, Data Quality Frameworks

Data Governance & Security: RBAC (Role-Based Access Control), Azure Purview, Data Governance, Data Lineage, Data Cataloguing, Compliance, Access Control, Azure Key Vault

DevOps & Automation: Azure DevOps, CI/CD Pipelines (YAML), GitHub, Git, Bash Scripting, Azure Pipelines, Agile / Scrum, Automated Workflow Orchestration

Languages & Querying: Python, SQL (T-SQL), PySpark, Bash, Scala (exposure)

Visualization & AI: Power BI, DAX, Data Visualization, Generative AI, AI-Assisted Data Enrichment, Large Language Models (LLMs)

PROFESSIONAL EXPERIENCE

Azure Data Engineer | Accenture – Bengaluru **2023 – 2026**

Client: Shell India Market Pvt Ltd

- Migrated on-premises data platforms to Azure cloud for a global energy enterprise, onboarding 5+ distributed source systems into Azure Data Lake Storage Gen2 (ADLS Gen2), improving scalability and reducing infrastructure costs by 20%.
- Built and optimized PySpark notebooks in Azure Databricks to process 50M+ records daily, increasing data accuracy by 20% and accelerating downstream reporting for analytics teams by 35%.
- Designed and implemented Delta Lake Medallion Architecture (Bronze, Silver, Gold layers) on a 10TB+ data Lakehouse using Databricks, reducing data retrieval time by 30% and enforcing data governance with schema enforcement and data lineage tracking.
- Developed complex SQL solutions, views, and stored procedures in Azure SQL Database and Synapse Analytics, improving query performance by 20% through partitioning, indexing, and query optimization strategies.
- Provided production support by troubleshooting pipeline issues, performing root-cause analysis, and implementing fixes to ensure data reliability and quality.
- Implemented incremental load and Change Data Capture (CDC) strategies in Azure Data Factory, improving pipeline efficiency by 30% while maintaining full data lineage across all ingestion layers.

- Automated CI/CD deployment workflows using Azure DevOps YAML pipelines and Bash scripting, reducing manual deployment effort by 25% and ensuring consistent releases across Dev, QA, and Production environments in Agile sprints.
- Integrated Azure Event Hubs for real-time data streaming with stateful stream processing via Azure Stream Analytics, reducing integration time by 10% and improving event processing accuracy by 15%.
- Applied RBAC policies and Azure Key Vault integration for secure credential management and data access control, ensuring compliance with enterprise data governance and security standards.
- Introduced dbt models for standardized, reusable SQL transformations with automated testing and documentation, improving data pipeline maintainability across the Synapse Analytics data warehouse.
- Leveraged Microsoft Fabric Lakehouse and Dataflows for unified analytics engineering on structured and semistructured datasets, enabling self-service BI reporting for business stakeholders via Power BI. *Client: FedEx – Salesforce Data Migration*
- Executed large-scale Salesforce-to-Salesforce data migration using Azure Data Factory, achieving 100% data accuracy across 2M+ migrated records spanning multiple global Salesforce environments.
- Designed ADF Dataflows with 20+ transformation steps to cleanse, validate, and standardize migrated Salesforce records, reducing data inconsistencies by 35% and ensuring compliance with target data governance standards.
- Implemented incremental load strategies with delta detection logic for ongoing data synchronisation, cutting processing time by 40% while maintaining 100% data integrity across all environments.
- Conducted end-to-end ETL testing across all ADF pipelines against business rules, data quality checks, and reconciliation reports, improving overall data quality scores by 30%.
- Configured Azure DevOps CI/CD pipelines (YAML) for fully automated deployment of ADF pipelines and linked services across Dev, QA, and Production environments, following Agile sprint delivery methodology.

CERTIFICATIONS

- Microsoft Certified: Azure Data Engineer Associate – DP-203
- Microsoft Certified: Security, Compliance, and Identity Fundamentals – SC-900 ● Microsoft Certified: Azure Data Fundamentals – DP-900

EDUCATION

B.Tech – Bharath University | Graduated 2023

Intermediate – Sri Chaitanya College of Education | 2019
